**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19 and 27-41, drawn to providing business continuity in an enterprise, including collecting resource information, the resource information describing at least one resource used by the enterprise; storing in a database resource information describing the at least one resource; assessing a criticality of the at least one resource; storing the assessment of the criticality of the at least one resource in the database; and developing a recovery plan for recovery from a loss of use of the at least one resource, classified in class 705, subclass 8.
  - II. Claims 20-26 and 42-46, drawn to providing business continuity in an enterprise in the event of an emergency, including collecting employee information with respect to employees of the enterprise, the employee information including at least the employee's name; storing the employee information in a database; activating an automated voice response unit during the emergency; receiving a phone call from an employee; and verifying the employee's identity, classified in class 705, subclass 7.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they

are shown to be separately usable. In the instant case, invention I has separate utility such as collecting resource information, the resource information describing at least one resource used by the enterprise; storing in a database resource information describing the at least one resource; assessing a criticality of the at least one resource; storing the assessment of the criticality of the at least one resource in the database; and developing a recovery plan for recovery from a loss of use of the at least one resource. In the instant case, invention II has separate utility such as collecting employee information with respect to employees of the enterprise, the employee information including at least the employee's name; storing the employee information in a database; activating an automated voice response unit during the emergency; receiving a phone call from an employee; and verifying the employee's identity. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Groups I and II are not required for each of the other Groups, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
